

Digital to Analog Converters - DAC IC Dual 12Bit Serial Inpt Vout

Manufacturers	Analog Devices, Inc
Package/Case	TSSOP-24
Product Type	Data Conversion ICs
RoHS	Rohs
Lifecycle

General Description

The parts offer guaranteed monotonicity, integral nonlinearity (INL) of ± 16 LSB maximum, low noise, and 10 μ s typical settling time.

The AD5722/AD5732/AD5752 use a serial interface that operates at clock rates up to 30 MHz and are compatible with DSP and microcontroller interface standards. Double buffering allows the simultaneous updating of all DACs. The input coding is user-selectable two's complement or offset binary for a bipolar output (depending on the state of Pin BIN/2sComp), and straight binary for a unipolar output. The asynchronous clear function clears all DAC registers to a user-selectable zero-scale or midscale output. The parts are available in a 24-lead TSSOP and offer guaranteed specifications over the -40°C to $+85^{\circ}\text{C}$ industrial temperature range.

The AD5722/AD5732/AD5752 are pin compatible with the AD5724/AD5734/AD5754, which are complete, quad, 12-/14-/16-bit, serial input, unipolar/bipolar voltage output DACs.

Features

Complete, dual, 12-bit digital-to-analog converter (DAC)

Operates from single/dual supplies

Software programmable output range +5 V, +10 V, +10.8 V, ± 5 V, ± 10 V, ± 10.8 V

INL error: ± 16 LSB maximum, DNL error: ± 1 LSB maximum

Total unadjusted error (TUE): 0.1% FSR maximum

Settling time: 10 μ s typical

Integrated reference buffers

Please see data sheet for additional features

Application

Industrial automation

Closed-loop servo control, process control

Automotive test and measurement

Programmable logic controllers
