General Description

The LT1965 series are low-noise, low-dropout linear regulators. The devices supply 1.1A of output current with a 310mV typical dropout voltage. The quiescent operating current is 500 μ A for the adjustable version, reducing to <1 μ A in shutdown. Quiescent current is well controlled; it does not rise in dropout like many other regulators. The LT1965 regulators have very low output noise, which makes them ideal for sensitive RF and DSP supply applications.

Output voltage ranges from 1.20V to 19.5V. The LT1965 regulators are stable with output capacitors as low as 10 μ F. Internal protection circuitry includes reverse-battery protection, current limiting with foldback, thermal limiting, and reverse-current protection. The LT1965 series are available in fixed output voltages of 1.5V, 1.8V, 2.5V, and 3.3V and as an adjustable device with a 1.20V reference voltage. The package offerings include the 5-lead TO-220 and 5-lead DD-Pak, the thermally enhanced 8-lead MSOP, and low profile (0.75mm) 8-lead 3mm \times 3mm DFN.
