General Description

The MCP6042 dual operational amplifier (op amp) has a gain bandwidth product of 14 kHz with a low typical operating current of 600 nA and an offset voltage that is less than 3 mV. The MCP6042 uses Microchip's advanced CMOS technology, which provides low bias current, high-speed operation, high open-loop gain and rail-to-rail output swing. The MCP6042 operates with a single supply voltage that can be as low as 1.4V, while drawing less than 1.0 of quiescent current per amplifier. The MCP6042 is available in standard 8-lead PDIP, SOIC and MSOP packages. This amplifier is ideal for industrial process control, low-power battery-operated devices, portable equipment and wearable products.
