

## AD8212YRMZ

Data Sheet

Current Sense Amplifier, High Voltage, 1 Amplifier, 185 µA, MSOP, 8 Pins, -40 °C, 125 °C

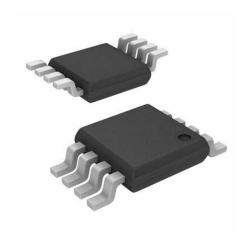

Manufacturers Analog Devices, Inc

Package/Case MSOP-8

Product Type PMIC - Current Regulation/Management

RoHS Rohs

Lifecycle

Please submit RFQ for AD8212YRMZ or Email to us; sales@ovaga.com We will contact you in 12 hours.

**RFO** 

## **General Description**

The AD8212S is a high common-mode voltage, current shunt monitor. It accurately amplifies a small differential input voltage in the presence of large common-mode voltages up to 65 V (>500 V with an external PNP transistor). The AD8212S is ideal for current monitoring across a shunt resistor in applications controlling loads, such as motors and solenoids. The current output of the device is proportional to the input differential voltage. The user can select an external resistor to set the desired gain. The typical common-mode voltage range of the AD8212S is 7 V to 65 V.Another feature of the AD8212S is high voltage operation, which is achieved by using an external high voltage breakdown PNP transistor. In this configuration, the common-mode range of the AD8212S is equal to the breakdown of the external PNP transistor. Therefore, operation at several hundred volts is easily achieved. The AD8212S features a patented output base current compensation circuit for high voltage operation mode. This ensures that no base current is lost through the external transistor and excellent output accuracy is maintained regardless of common-mode voltage or temperature. Applications include: Current shunt measurement, Motor controls, DC-to-DC converters, Power supplies, Battery monitoring, Remote sensing

## **Features**

Adjustable gain

High common-mode voltage range 7 V to 65 V typical 7 V to >500 V with external pass transistor

Current output

Integrated 5 V series regulator
