

## ADG406BPZ

Data Sheet

LC2MOS +- 15V 16 Channel High Performance Analog Multiplexer

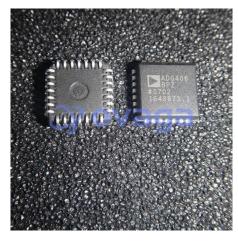

Manufacturers <u>Analog Devices, Inc</u>

Package/Case PLCC-28

Product Type Interface - Switches, Multiplexers, Demultiplexers

RoHS Rohs

Lifecycle

**RFO** 

## **General Description**

The ADG406/ADG407/ADG426 are designed on an enhanced LC2MOS process that provides low power dissipation yet gives high switching speed and low on resistance. These features make the parts suitable for high speed data acquisition systems and audio signal switching. Low power dissipation makes the parts suitable for battery powered systems. Each channel conducts equally well in both directions when on and has an input signal range which extends to the supplies. In the off condition, signal levels up to the supplies are blocked. All channels exhibit break-before-make switching action preventing momentary shorting when switching channels. Inherent in the design is low charge injection for minimum transients when switching the digital inputs.

## **Features**

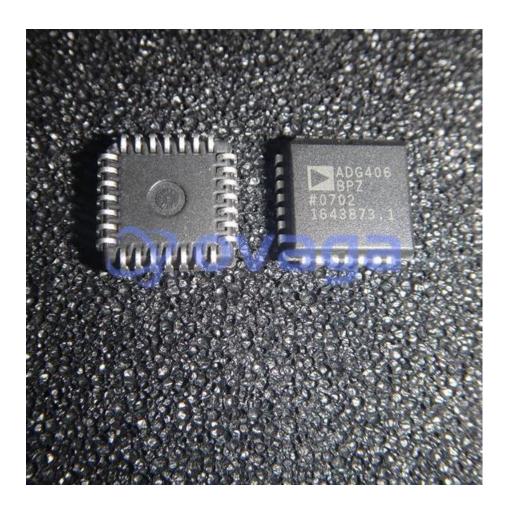

44 V supply maximum ratings

VSS to VDD analog signal range

Low on resistance (80  $\Omega$  maximum)

Low power

Fast switchingtON < 160 nstOFF < 150 ns
